

GD 475-SJ

Universal glass break detector with junction box for most glass types, Glued

E-NR: 6310406

The GD 475-S has the same functions as the GD 475 with transistor output and must be connected to the control panel via an IU 400 interface/analyser unit. The detector has a coiled cable with a modular contact which is connected to the junction box JB 103-4, which allows it to be quickly and easy disconnected from the detector loop when, for example, cleaning windows. The signals from the detector comes on pin 5 & 6 in JB 103-4. Which is connected polarity independent to IU 400 pin 3 & 4.

TECHNICAL DETAILS

Approvals	F&P, FG, VdS G 121503 Class B
Supply voltage	5-15 VDC
Alarm indication	LED
Operating temperature	-40 - +55°C
Housing protection class	IP 67
Dimensions (H x Ø) mm	11 x 26
Grade	3

ORDER INFORMATION

Model	E-NR	Description
GD 475-SJ	6310406	Glass break detector with transistor output, coiled cable with modular contact and junction box JB 103-4
